| 3 Examples..... | 2 |

1. Description

The Document data type describes a published document in the DAV store.

2. Document

| Attribute | Description | Required |
|-----------|--|----------|
| file | The file name. | Yes |
| dir | Directory name. | Yes |
| type | Type of file. Valid types are: "text/plain", "text/html", "text/xml" | Yes |

3. Examples

Shows the document data type used within a transform-create task, specifying the document to save into the DAV share.

```

    <transform-create serverurl="${viewdoc.server}"
depot="${entity.depot}"
    resultproperty="rs"
    comment="something re this update">
    <context direction="internal" proximity="1"
maprefuri="${entity.mapref-uri}"/>
    <document file="haha.txt" dir="/${entity.depot}/publish"
type="text-plain"/>
    <template file="${templateFile}"
dir="/${entity.depot}/templates" type="simple"/>
    </transform-create>

```
